

[illegible]

The first of these is the
 fact that the population
 of the world is increasing
 at a rapid rate. This is
 due to a number of factors,
 including improved medical
 care, increased food supply,
 and a general increase in
 living standards. As a result,
 the world's population is
 expected to reach over 8 billion
 by the year 2000. This
 rapid growth has led to a
 number of problems, including
 overcrowding, pollution, and
 a strain on natural resources.
 It is therefore essential that
 we find ways to manage
 this growth in a sustainable
 manner.
